TECHNOLOGY GROUP

# GraderPro 75 – 220

**60 years of egg grading experience  
in one machine**

## EVERY EGG HAS A TAG

All the SANOVO packaging and grading machines have traceability options, but the GraderPro offers single egg traceability. **“Every egg has a tag”**, from the first detection system in the grader, the software tracks every single egg until packed in the carton, case, or pallet.

Egg tracing enables you to track your eggs back to where they came from. Available in sizes from 75 to 220 cases/hour, the machines are designed to meet all your requirements for efficient and safe grading.

### EFFICIENCY

# 01

#### EFFICIENCY

By re-designing the main track alongside the new no-side-impact technology, the GraderPro can run with reduced track-speed of up to 25% compared to other manufactures.

### HYGIENE

# 02

#### HYGIENE

The design of the machine ensures that the all-integrated CIP (cleaning-in-place) cleans all the necessary parts without blind spots in a cost-efficient way.

### FOOD SAFETY

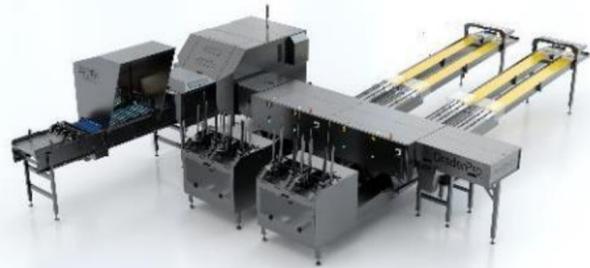

# 03

#### FOOD SAFETY

With 100% egg traceability you develop your business alongside food safety requirements. Food safety is standardly guaranteed with food contact material.

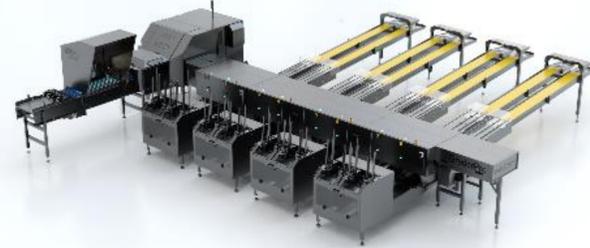

60 years of egg grading experience in one machine.

Assure the quality and success of your production in the long term with easy-to-view, actionable insights from the cloud in real-time. **Wherever you are, whenever you want.**

# Crack detection with Artificial Intelligence

**SANOVO**  **ProVision AI**

SANOVO embarked on the journey of Vision systems supported by the incredible technological promises of Artificial Intelligence (AI).

The current vision systems are applied to detect dirt on eggs or leaking eggs. Therefore, the development continued to apply this technology to crack detection, without touching the eggs. This eliminates cross contamination issues and further mechanical stress to the eggs!

The **SANOVO ProVision AI** system is equipped with extras, and always gets smarter through machine learning. We have already proven the fact that we are able to detect cracks on washed white and brown eggs and are continuing the development to outperform any other crack detection system on all levels.

# Next Generation Egg Grading

Become a state-of-the-art grading station with **SANOVO** TECHNOLOGY GROUP GraderPro

## Full Traceability

Track your eggs individually for adding value to your partners and consumers down the value chain.

## Food Safety

Food contact material approved grading process through compliance of machine parts

## Hygienic Design

Built-in CIP (cleaning-in-place) for the hard-to-clean parts within the grading setup, saving production time.

# Next Generation Egg Grading

Become a state-of-the-art grading station with **SANOVO** TECHNOLOGY GROUP GraderPro

In today's egg world food safety is an increasing demand by businesses but also by industry regulating entities. With your eggs graded and packed by the GraderPro you are able to provide valuable data from the farm to the end consumer.

**Full Traceability**

# Next Generation Egg Grading

Become a state-of-the-art grading station with **SANOVO** TECHNOLOGY GROUP GraderPro

**Food Safety**

The traceability of every individual egg is one aspect of fundamental food safety standards. In addition to that, we make sure that the parts built into our equipment is food contact material approved. We want to make sure that your operation is according to international food safety standards. Read more about this matter in our [declaration of compliance](#) document on our website.

# Next Generation Egg Grading

Become a state-of-the-art packing station with **SANOVO** TECHNOLOGY GROUP GraderPro

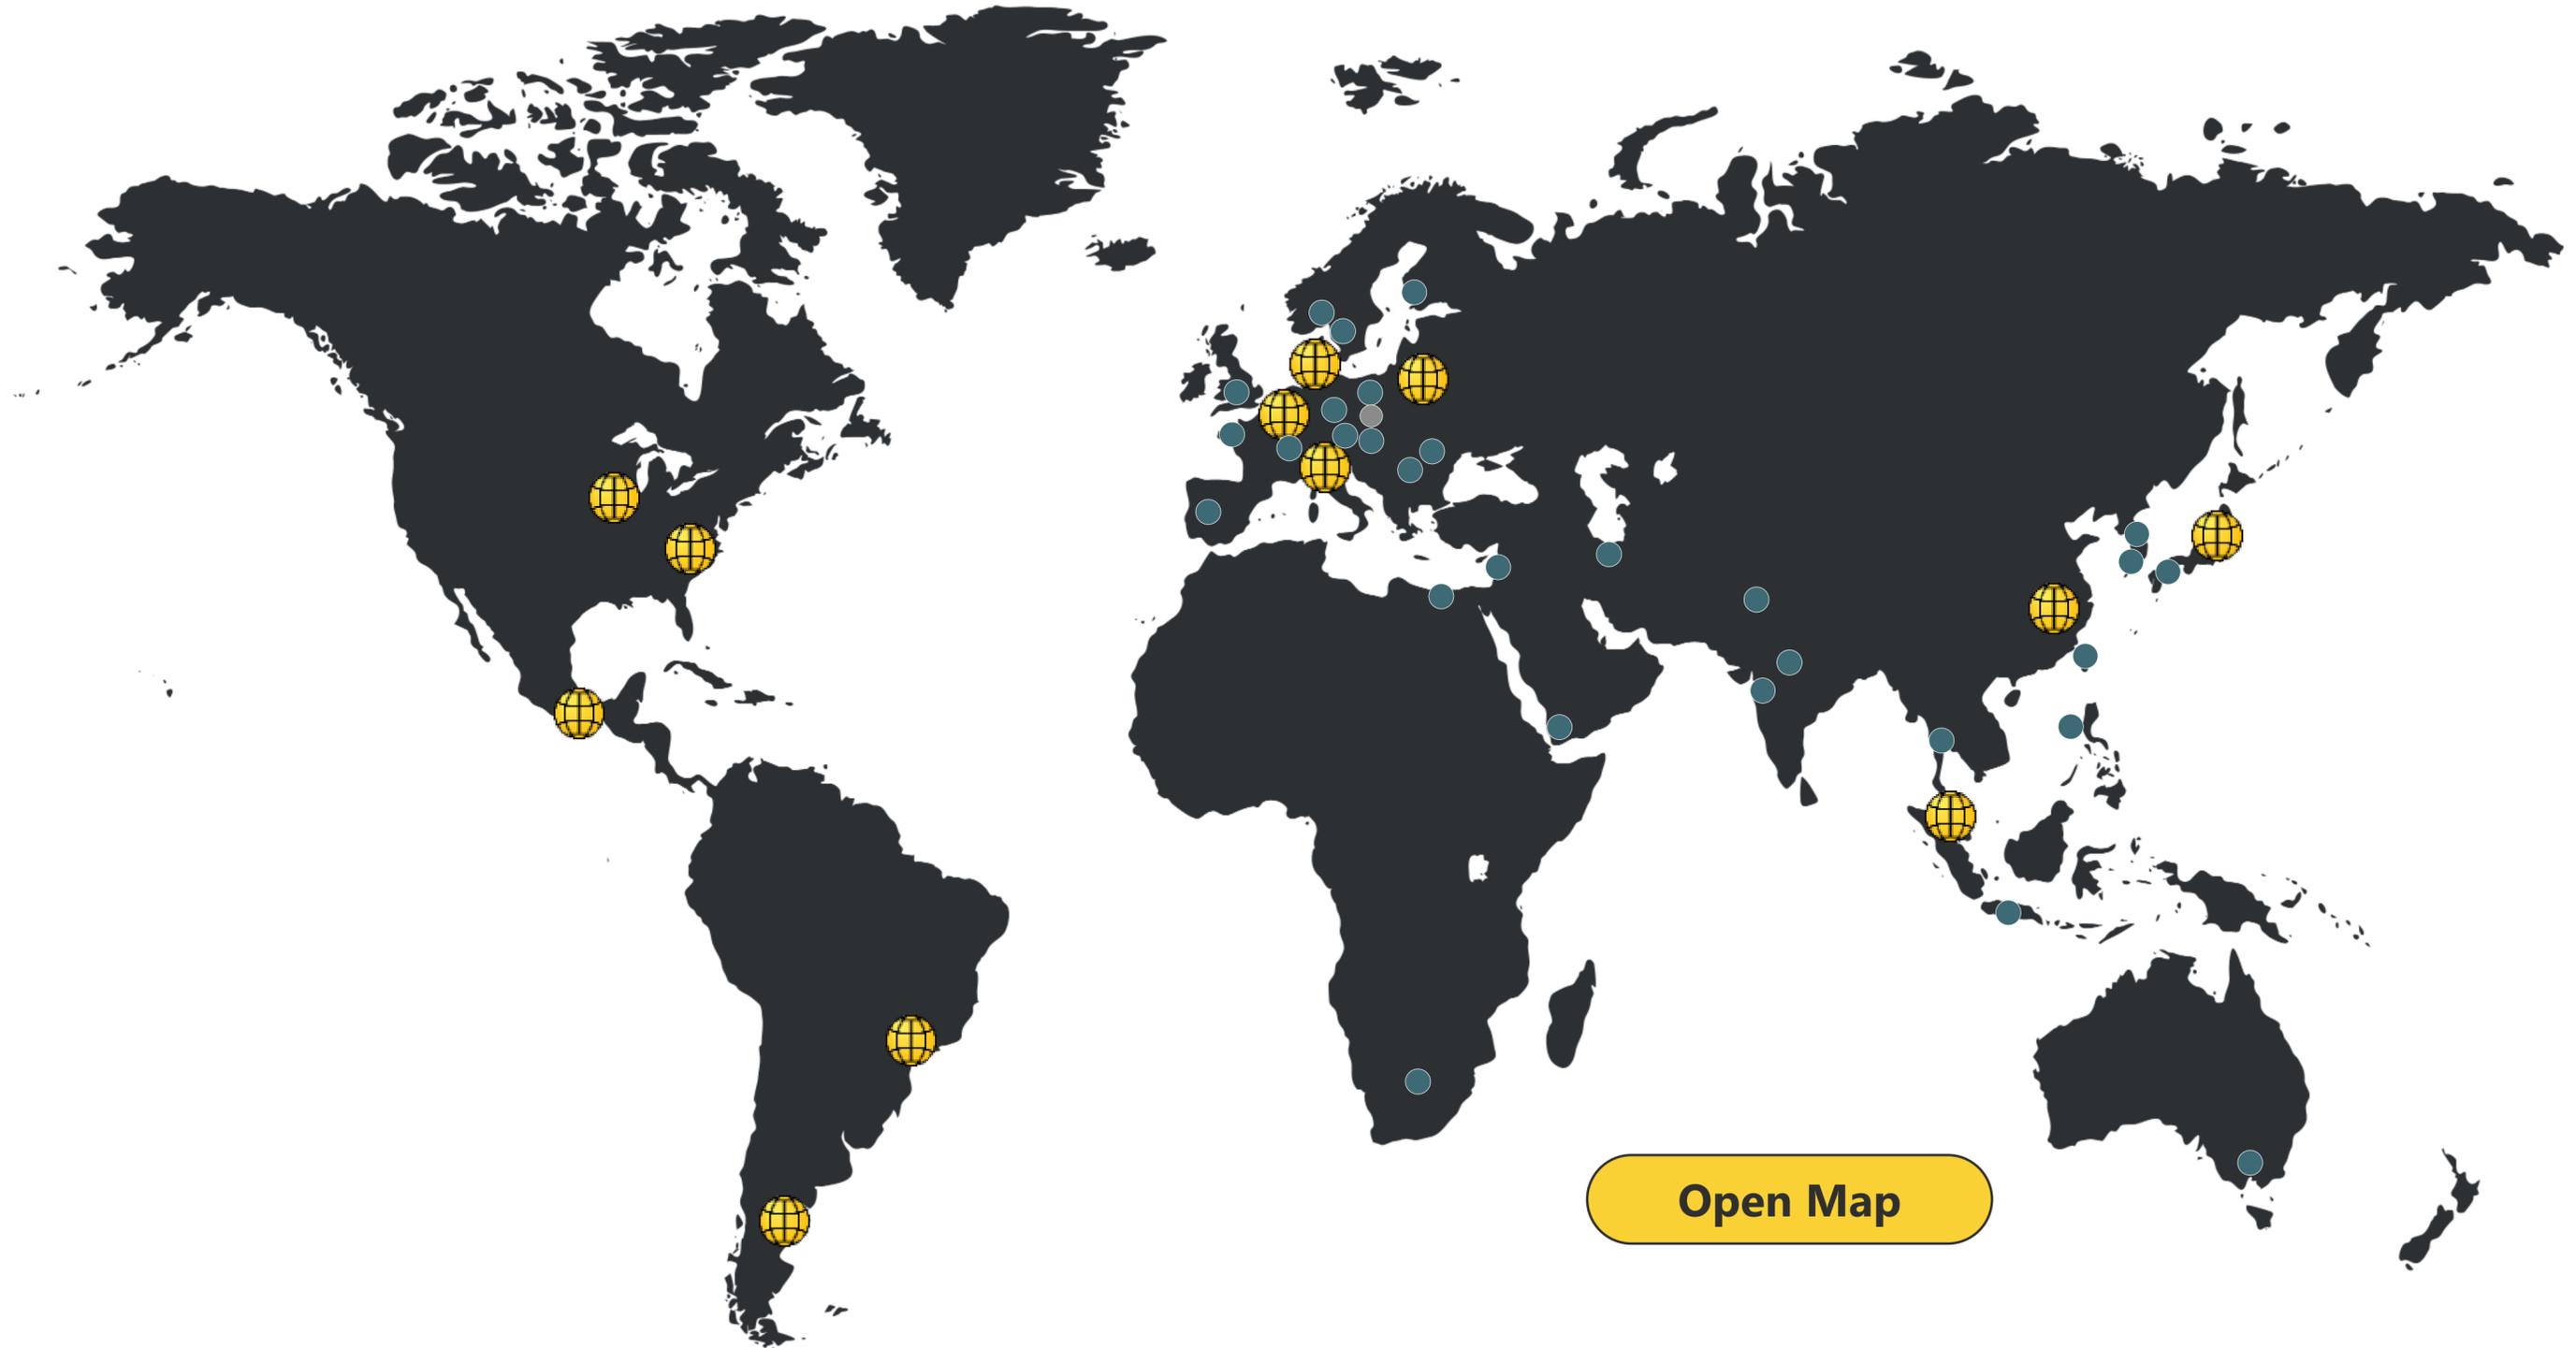

The cleaning of machines take time. That's why we focused on this aspect specifically with the GraderPro and enabled it for CIP integration. That goes for the accumulator, infeed, removal gates, crack detectors, weighing scales, inserter, and main track. As result there is a significant cost reduction through saving manpower. In addition, the water is reused, which is saving energy cost.
